SUMMARY

AI engineer with 3 years of professional Python experience building automation, data pipelines, and test frameworks at Colruyt Group. MS Data Science candidate at the University of North Texas (May 2027). Focused on building LLM applications that are reliable at scale: serving, memory, load testing, and evaluation of model quality, latency, and cost.

TECHNICAL SKILLS

Languages: Python, SQL, Java, C
AI / ML: Scikit-learn, Pandas, NumPy, feature engineering, model evaluation, NLP (NLTK, spaCy, TF-IDF)
Testing & Performance: Selenium, TestNG, JMeter, LoadRunner, data-driven test frameworks, load and stress testing
Data: PySpark, MySQL, ETL pipelines, Power BI, Tableau
Tools: Git, Jira, VS Code, IntelliJ, Firebase

EXPERIENCE

University of North Texas — Data & AI Engineer (Student Assistant) Apr 2026 – Present

- Developing Python scripts that automatically flag discrepancies in IT compliance data from ServiceNow and SharePoint, replacing manual reconciliation.
- Building an LLM-based workflow that categorizes and summarizes ServiceNow tickets to speed up compliance tracking.
- Build and maintain Power BI dashboards that track IT compliance metrics, reconciling data from multiple sources with the IT Compliance team.

Colruyt Group India — Development & Test Automation Engineer Jun 2022 – Jul 2025

Joined as intern, Mar 2022

- Built Python applications and automation for data processing, validation, and backend integration across enterprise applications.
- Designed reusable data-driven test frameworks in Python, Selenium, and TestNG, cutting manual testing effort by 40% and raising test coverage by 30%.
- Ran load, stress, and performance tests with JMeter and LoadRunner; identified system bottlenecks that contributed to a 20% improvement in application response time.
- Wrote reusable Python and SQL scripts for data ingestion and transformation, and optimized SQL queries to speed up processing and reporting.

PROJECTS

SkyMind — AI Orchestration Platform (in progress) Nov 2026 – Present

Python, FastAPI, LLM APIs, Redis, Docker, Kubernetes

- Building a platform that deploys LLM chatbots from a user spec (expected users, latency target, memory type, budget), with automatic capacity planning and autoscaling on Kubernetes.
- Designing configurable conversation memory (Redis for short-term, pgvector for long-term) and model routing between low-cost and high-capability LLMs.

Student Performance Prediction Sep 2025 – Oct 2025

Python, Pandas, Scikit-learn

- Built regression and classification models to predict student grades from demographic and activity data, using feature engineering and hyperparameter tuning to improve accuracy.

Vehicle Rental and Hosting App Feb 2022 – Mar 2022

Android, Firebase

- Built a full-stack Android app for listing, searching, and booking vehicles, with user authentication and database-backed booking workflows.

EDUCATION

MS, Data Science — University of North Texas, Denton, TX Expected May 2027
B.Tech, Computer Science — DVR & Dr. HS MIC College of Technology, India 2018 – 2022
